Minimum required Workflow. You can add more algo if want (max page: 10)

1. Raw Data
2. Exploratory Data Analysis (EDA)

   - Visualization

   - Null/Unique check
3. Train-Test Split

4. Preprocessing ,scaling as required

5. Feature Extraction and Feature selection if applicable

6. ML Algorithms

   For classification (- DT, Logistic Regression, SVM, RF, KNN, AdaBoost, XGBoost)

For regression(- DT regressor, Lasso,ridge, linear Regression, SVR, RF regressor, KNN regressor)

7. Hyper parameter tuning

8. Design Bragging and boosting technique combining all

9. Model Evaluation and compare

   For classification (Precision, recall, accuracy, F1score, AUC, ROC, confusion matrix)

   For regression(MSE, MAE, RMSE, R^2, adjusted R^2)

10. Design ensemble technique using all individual ML algorithm and tuning

11. Comparative analysis

12. If Highly imbalanced dataset. Handle it by upsampling for better prediction.

The report must include those following points.

- Introduction
- Relevance and importance
- Objective
- Methodology used (flowchart, used methods, equation, schematics)
- Results and comparative analysis (table, diagram and and analysis of the result)
- Conclusion and Discussion
